## To Note

---

1. To download the repository, you can just clone it:

- `git clone`

2. To download a individual file, use `wget` or `curl`

- `wget https://raw.githubusercontent.com/$author-name/$repository-name/$branch-name/path/to/file`
- `curl -L -O https://raw.githubusercontent.com/$author-name/$repository-name/$branch-name/path/to/file`

3. Each folder will have its own README like this

4. Recommended workflow

- curl the `curl_repositories.sh` script
  - `curl -L -O https://raw.githubusercontent.com/Thanatisia/SharedSpace/main/curl_repositories.sh`
- Change Permission to allow execution
  - `chmod +x curl_repositories.sh`
- Edit and append any and all links + filename of your requirement.
- Run script
  - `./curl_repositories.sh`
  - Enter your file of choice
  - Download
